VBA Macro: Save a PowerPoint Presentation To PDF Programmatically

If you need to **save a PowerPoint presentation to PDF** format programmatically using VBA code, here is a simple macro to do the job.

```
Sub SaveAsPDF()  
    ActivePresentation.ExportAsFixedFormat ActivePresentation.Path & "\" & ActivePresentation.Name & ".pdf"  
End Sub
```

This macro snippet will make possible to save the active presentation to an output PDF file in the same path where you have the presentation saved.
